

SIWEX SIWES placement finder

A web app that helps Nigerian students find SIWES placements in tech hubs, and helps hubs pick and track their interns.

300 level project documentation

Live app: <https://siwex-production.up.railway.app>

Demo student: imaobong@siwex.ng / demo1234. Demo hub: start@siwex.ng / demo1234

Contents

8. Deployment
9. Five minute presentation script
10. Decisions and limits

1. Overview

Every Nigerian university student in a technical course must do SIWES (Students Industrial Work Experience Scheme), usually 12 or 24 weeks. Finding a placement is mostly word of mouth: students walk from office to office with letters, and hubs get applications they cannot track.

SIWEX puts 17 tech hubs in 10 Nigerian cities in one directory, starting with Futtibills, Start Innovation Hub, The RootHub and Square One in Uyo. Students filter hubs by city and track, see which roles still have slots, apply with a short note and follow every reply on one dashboard. Hubs post openings, accept or reject applicants, and watch their interns progress week by week.

Users and roles

Role	Can do
Visitor	Browse and search hubs and openings.
Student	Register with school, course, level, city and SIWES length. Apply, withdraw, see recommendations and placement progress.
Hub	Register a hub profile. Post openings, accept or reject applications, see interns and their progress.

Hubs in the demo data

Hub	City	Address	Source
Start Innovation Hub	Uyo	Plot 6, Unit C, Ewet Housing Estate	Verified on starthub.com.ng
The RootHub	Uyo	AKEES Plaza, opposite Ibom Hall, IBB Avenue	Verified on public business listings
Futtibills	Uyo	Nwaniba Road (to be confirmed)	Named in the brief. No public listing found, so the address is marked unconfirmed

Square One	Uyo	Oron Road (to be confirmed)	Named in the brief. No public listing found, so the address is marked unconfirmed
Chainspace HQ	Uyo	Udo Udoma Avenue (to be confirmed)	Found as an Uyo co-working space; street not confirmed
Co-Creation Hub	Lagos	294 Herbert Macaulay Way, Yaba	Verified, public address
Leadspace	Lagos	10 Hughes Avenue, off Murtala Muhammed Way, Yaba	Verified on public listings
KodeHauz	Eket	38 Afaha Uqua Road	Verified on public listings
Ventures Park	Abuja	18 Khartoum Street, Wuse II	Verified (TechCabal, AfriLabs)
Wennovation Hub	Ibadan	Alpha and Omega Building, Queen Elizabeth II Road, Mokola	Verified on wennovationhub.org
CoLab	Kaduna	4 Barnawa Close, Barnawa	Verified on public listings
Roar Nigeria Hub	Enugu	Ademola Street, Ogui	Verified (Enugu campus listing)
Harvoxx Tech Hub	Port Harcourt	Alcon Road, Woji Housing Estate	Verified on public listings
SpaceTrax Innovation Hub	Port Harcourt	Ada-George Road	Verified on public listings
Ilorin Innovation Hub	Ilorin	Ahmadu Bello Way	Verified on public listings
Guru Innovation Hub	Calabar	Eta Agbor (street to be confirmed)	Area from the hub's own pages
Lift Hub	Calabar	6A Housing Estate Road, off Ndidem Usang Iso (Marian)	Verified on public listings

Openings, stipends, students and applications are sample data for the demo. They are not real offers from these hubs.

2. How the core logic works

All business rules live in `src/lib/rules.ts` as pure functions. None of them reads the clock or the database: the caller passes "today" as a `YYYY-MM-DD` string. In the app, today comes from `getToday()`, which returns `SIWEX_TODAY` when it is set and otherwise the current date in Lagos. This makes the demo and the tests repeatable.

Opening status

Status	Rule
Closed	Today is after the deadline. Checked first, so a closed opening with free slots still shows Closed.
Full	Accepted applications equal the number of slots.
Closing soon	7 days or less to the deadline (the deadline day counts as open).
Open	Everything else.

Can a student apply? (`checkCanApply`)

The checks run in this order and the first failure is shown to the student in plain words:

1. The opening is not closed.
2. The opening is not full.
3. The student has not already applied to it (a withdrawn application can be sent again).
4. The student does not already have an accepted placement.
5. The student has fewer than 3 pending applications, so nobody hoards slots.
6. The placement is at least as long as the student's SIWES (a 12 week opening cannot satisfy a 24 week SIWES).

Other rules

Function	What it does
<code>applicationDisplay</code>	A pending application older than 10 days shows as "No response yet" to both sides.
<code>checkCanDecide</code>	A hub can only decide pending applications, and cannot accept once the opening is full.
<code>placementProgress</code>	From start date and length: not started (with days to go), in progress (week N of M and percent), or completed.
<code>matchScore</code>	0 to 100. 50 if the track is the top fit for the course (35 for another good fit), 30 for the same city, 20 if the placement covers the SIWES length. Used to rank recommendations and shown to hubs.

The same rules run twice: once to decide what the page shows (for example, hide the apply form and explain why), and again inside the Server Action before anything is written, so a stale page cannot break a rule.

3. Architecture and data model

Browser

- Server rendered pages
- Small client forms using `useActionState`
- HTTP-only session cookie

Next.js 16 (App Router)

- Server Components read data
- Server Actions write data
- `proxy.ts` guards `/student` and `/hub`
- `/api/health` pings the database

PostgreSQL

- Drizzle ORM queries
- drizzle-kit SQL migrations in `/drizzle`
- Hosted on Railway

Folder	Contents
<code>src/lib/rules.ts</code>	Pure business rules (status, apply checks, progress, match score).
<code>src/lib/dates.ts</code>	Date helpers and <code>getToday</code> with <code>SIWEX_TODAY</code> support.
<code>src/lib/data.ts</code>	All database reads and writes. Every user query is filtered by the signed-in user id.
<code>src/lib/validation.ts</code>	Zod schemas for every form and a helper that turns issues into field errors.
<code>src/lib/session.ts</code> , <code>auth.ts</code>	JWT signing with jose, cookie handling, role guard.
<code>src/app</code>	Pages, Server Actions (<code>actions.ts</code>) and the health route.
<code>src/db</code>	Drizzle schema, connection and demo seed data.
<code>src/components/brand.tsx</code>	SIWEX logo, generated geometric hub logos, cover pictures and procedural city skylines.
<code>scripts/gen-illustrations.ts</code>	Generates the flat illustrations in <code>public/illustrations</code> (no image CDN needed).

Tables

Table	Key columns	Notes
users	id, email (unique), password_hash, name, role	role is student or hub. Passwords hashed with <code>bcryptjs</code> .
students	user_id (PK, FK users), school, course, level, city, required_weeks	One row per student user.
hubs	id, owner_user_id (unique FK), slug, name, city, state, address, address_verified, about, tracks[], color	One hub per hub user.
openings	id, hub_id, title, track, slots, duration_weeks, start_date, deadline, stipend_naira	Status is computed, never stored.
applications	id, opening_id, student_user_id, status, note, applied_on, decided_on	Unique on (opening_id, student_user_id). Status: pending, accepted, rejected, withdrawn.

Security

- Sessions are HS256 JWTs signed with SESSION_SECRET, stored in an HTTP-only, SameSite=Lax cookie (Secure in production) for 7 days.
- proxy.ts redirects signed-out visitors away from dashboards; each page and action checks the role again.
- Hub actions join through hubs.owner_user_id, so a hub can never decide another hub's applications. Students can only withdraw their own.

4. Walkthrough of every screen

Screenshots were taken with Playwright against the demo data with SIWEX_TODAY=2026-10-02.
Numbers on each image match the notes below it.

4.1 Home page

The landing page a student sees first. It explains the product in one line and lets them search straight away.

- 1 Search card: keyword, city and track. Sends the student to the openings list with the filters applied.
- 2 Live counts from the database: hubs, cities, live openings, open slots and students placed.
- 3 Browse by track. Each tile shows how many live openings that track has.
- 4 Sign in. The demo account is filled in on the next page.

4.2 Home page, further down

Below the tracks the home page lists the hubs with the most open slots, roles closing this week and hubs by city.

4.10 Hub dashboard

Signed in as Mfon Udoh of Start Innovation Hub. The hub reviews applications, watches interns progress and posts openings.

The screenshot shows the SIWEX Hub dashboard for Start Innovation Hub. The user is signed in as Mfon Udoh. The dashboard features a top navigation bar with links to Openings, Hubs, Dashboard, and a profile icon. Below the navigation bar, there's a header section with the Start Innovation Hub logo and a public page toggle. The main content area is divided into several sections:

- Statistics:** A row of four boxes showing: 2 Live openings, 4 Pending applications, 1 Waiting over 10 days, and 2 Accepted interns.
- Applications to review:** A list of three applications. Each application shows the applicant's name, profile picture, university, and the role they applied for. The first application is from Ekemini Akpan for a Frontend Developer Intern (React) position. It has a 100% match score and a 'No response yet' flag. The second application is from Chiamaka Obi for a Frontend Developer Intern (React) position. It has a 70% match score. The third application is from Imaobong Udo for a Frontend Developer Intern (React) position. It has a 100% match score. Each application has 'Accept' and 'Reject' buttons.
- Your openings:** A list of three openings: Frontend Developer Intern (React), UI/UX Design Intern, and Digital Marketing Intern. Each opening shows the number of slots filled and the deadline.
- Post a new opening:** A form to create a new opening. It includes fields for role title, track, length, slots, monthly stipend, application deadline, and start date. There is also a text area for 'What will the intern do?' and a 'Publish opening' button.
- Interns:** A list of two interns: Nsikak Etim and Fatima Bello. Each intern shows their progress bar and the week number of 12.

The footer section contains links for Students, Hubs, and Cities, along with a system status indicator.

- 1 Live openings, pending applications, applications waiting more than 10 days and accepted interns.
- 2 Flag on an application left unanswered for over 10 days.
- 3 Accept or reject. Accepting is refused once the opening is full.
- 4 Intern progress: week number and a bar computed from the start date and length.

- 5 Post a new opening. Zod checks that the deadline is before the start date and not in the past.

4.11 After a hub accepts

The hub accepted Imaobong for the Frontend Developer role. Her dashboard now shows the placement with a countdown to the start date.

5. Mobile view

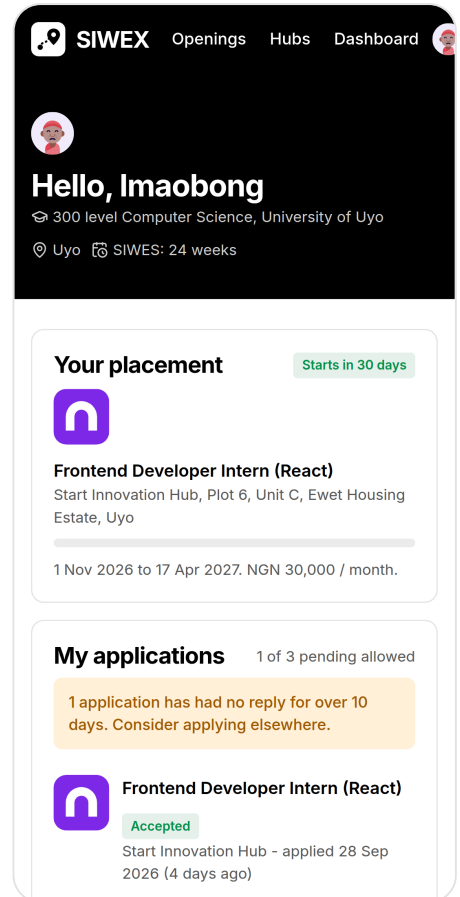

The layout is a single column under 760px wide. Grids use `minmax(0, 1fr)` so long text and lists never push the page sideways, and the header hides secondary links. A Playwright test on a Pixel 7 viewport checks that the page has no horizontal scroll.

Student dashboard with placement

6. Running locally

```
service postgresql start
sudo -u postgres createdb siwex
sudo -u postgres createdb siwex_test
cp .env.example .env          # edit DATABASE_URL if needed
npm install
npm run db:migrate
npm run db:seed                # wipes and reseeds demo data
npm run dev                    # http://localhost:3000
```

Variable	Purpose
DATABASE_URL	Postgres connection string for the app.
TEST_DATABASE_URL	Separate database used by integration and e2e tests.
SESSION_SECRET	Secret for signing session tokens (16+ characters, required in production).
SIWEX_TODAY	Optional YYYY-MM-DD date that pins "today" for demos and tests.

Script	What it does
npm run dev / build / start	Next.js development, production build, production server.
npm run db:generate	Create a new SQL migration from schema changes.
npm run db:migrate	Apply migrations.
npm run db:seed / db:seed:if-stale	Reseed demo data / seed only when the database is empty or the seed version changed.
npm test	Vitest unit and integration tests.
npm run test:e2e	Playwright end-to-end tests on desktop and mobile.
npm run docs:build	Rebuild this PDF and the slide deck (run npm run build first).

7. Testing

Suite	Tool	Tests	Covers
Unit	Vitest	41	Dates and SIWEX_TODAY, every rule in rules.ts, Zod schemas, JWT sign and verify.
Integration	Vitest + real Postgres (siwex_test)	21	Hub search and filters, openings browse and city summary, sign up and login, apply limits, withdraw scoping, recommendations, hub decisions, cross-hub access is refused, opening creation.
End to end	Playwright, production build	19 (15 desktop, 4	Home, track tiles and city cards, openings page, directory filters, demo login pre-fill, inline validation, apply flow, accept

		mobile)	and reject, posting an opening, auth redirects, health check, no sideways scroll on mobile.
--	--	---------	---

All 81 tests pass. Integration and e2e tests reseed the test database before each test, with today fixed at 2026-10-02.

```
npm test          # 62 passed (41 unit + 21 integration)
npm run test:e2e  # 19 passed
```

8. Deployment

The app runs on Railway in the project "school-projects", connected to the GitHub repository so every push redeploys.

1. A PostgreSQL service is provisioned in the project.
2. The app service has `DATABASE_URL=${{Postgres.DATABASE_URL}}`, a random `SESSION_SECRET` and `NODE_ENV=production`.
3. `railway.json` builds with `npm run build`. The start command runs migrations, seeds demo data when the database is empty or when the seed version in the code is newer than the one stored in `app_meta`, then runs `next start -H 0.0.0.0`.
4. Railway calls `/api/health`, which runs `select 1` against the database, before switching traffic to a new deployment.

Live URL: <https://siwex-production.up.railway.app>

9. Five minute presentation script

Time	Say and do
0:00-0:30	Problem. "Every one of us needs a SIWES placement. Today it is letters and word of mouth, and hubs lose track of applications." Show the home page.
0:30-1:15	Directory. Scroll the home page: track tiles, hubs by city. Click Openings and tap a track chip. Click Hubs and tap the Uyo chip. Point at the slots left badge and the verified address tick. Open Start Innovation Hub and show Closing soon, Open and Closed badges.
1:15-2:15	Student. Click Sign in; the demo login is already filled. On the dashboard point at the "no reply for over 10 days" warning and the match scores. Open Futtibills, apply with a too-short note to show the inline error, then a proper note. Show it on the dashboard and that the pending cap now blocks a fourth application.
2:15-3:15	Hub. Sign out, choose Hub demo, sign in. Walk the four stat cards. Accept Imaobong. Point at the interns list and progress bars. Post a new opening, show the deadline rule error, then publish.
3:15-3:45	Back to the student. Sign in as Imaobong again and show the placement card counting down to the start date.
3:45-4:30	How it works. Show the architecture slide: Next.js Server Components and Server Actions, Drizzle and Postgres on Railway, rules as pure functions with a pinned "today", 81 automated tests.
4:30-5:00	Wrap up. Phone view of the site, what we would add next (logbook upload, school supervisor sign-off, hub verification), then questions.

10. Decisions and limits

- Futtibills and Square One were named in the brief but have no public listing that we could find, so their street addresses are placeholders and marked "Address to be confirmed" in the app.
- A student can hold at most 3 pending applications and only one accepted placement. A pending application is flagged after 10 days. Openings are "closing soon" from 7 days before the deadline.
- SIWES length is 12 or 24 weeks. A placement shorter than the student's SIWES is blocked.
- Stipends are monthly, in naira, shown as "NGN 30,000 / month"; 0 means unpaid.
- The visual style follows Uber: black and white, bold Inter type, black buttons and flat illustrations. Hub logos are geometric marks generated from the hub name and colour, covers and track pictures are SVG illustrations made for this project, and avatars are generated locally with DiceBear. The site makes no image requests to outside servers.
- 17 hubs across 10 cities are listed. Addresses were checked against public sources; Futtibills, Square One, Chainspace HQ and Guru Innovation Hub show "Address to be confirmed".
- Not built: password reset, email notifications, file uploads (CV, logbook) and admin verification of hubs.
